

SEAMED/SEAMLESS FABRIC WALL PANEL SYSTEM

Abstract Of The Disclosure

5 A fabric wall panel system includes fabric wall panels mounted by means of a ceiling track with a downwardly open channel and a base track with a panel support surface. Each fabric wall panel is mounted by inserting the top of the fabric wall panel into the downwardly open channel and supporting the fabric wall panel on the panel support surface of the base track. The fabric wall panel may be custom fabricated to eliminate vertical seams or provided in standard size panels with vertical seams between panels. A corner trim piece hides the vertical
10 seam at the corner of the room, a vertical seam trim piece hides the vertical seams, and an outside edge trim piece covers exposed edges of the wall panels. The base track includes a removable trim attachment strip with decorative trim. The base track may be used to trim around openings such as windows.
